- Oracle Transportation Management

Companies with global sourcing, manufacturing, sales and distribution operations face the challenge of moving goods between many different countries—each with different rules, regulations and trade controls. Oracle Trade Compliance enables companies to manage security, legal, regulatory, and corporate compliance on all of their cross-border transactions.

Centralize World Wide Trade Compliance

Does your company have a siloed approach to managing trade compliance, with groups in each region performing similar functions? Do you find it difficult to manage all regulatory or internally mandated trade rules in your current trade environment? Does your customs team talk to your export team to leverage similar business processes?

Today, most organizations outsource trade compliance or manage it within a fragmented organizational structure. Both of these approaches lead to challenges regarding visibility to goods, control of processes and product allocation, and overall supply chain cost effectiveness. Oracle Trade Compliance is a global application companies can use to model their unique trade compliance situation and strategy. Each company's approach is based on the specific industry, governing rules and regulations, commodities they trade, countries with which they trade, and the processes employed—whether import or export.

Oracle Trade Compliance offers advanced trade compliance screening and license management beyond just restricted party and sanction screening. This global approach takes companies beyond a US-centric or other regional view of trade and extends to accommodate more complex anywhere-to-anywhere trade compliance.

Mitigate Financial Risk

Does your company proactively screen and manage trade transactions for required trade controls to avoid delays, penalties and fines? Does your company maintain detailed audit trails of compliance screenings and classifications used for compliance purposes?

Oracle Trade Compliance supports the creation and management of trade transactions in order to perform different trade compliance functions worldwide. These trade transactions may be related to sales orders, purchase orders, intercompany orders, service orders, ocean shipments, air shipments, etc. Trade controls can take different forms, and can be specific controls dictated by each regime that regulates a company's items or by the company itself.

For example, if a US company doing business in Japan exports goods from Japan, then the US and Japanese rules must be applied to the export transaction in order to determine what controls would apply from each regime. The controls will fall into specific categories such as licenses, license exceptions, documents, registrations, and so on. If these controls are made evident in advance, companies can avoid the penalties and fines associated with non-compliance.

Increase Working Capital Utilization

Are you able to anticipate transactional trade compliance milestones to keep goods moving as planned? Are your cycle times longer than you would like?

Oracle Trade Compliance helps companies increase working capital utilization by ensuring that goods stay moving. With the ability to anticipate compliance milestones and avoid potential delays or roadblocks, companies can maintain and accelerate the movement of goods through the supply chain, improve cycle times, and maintain high levels of customer satisfaction. Oracle Trade Compliance provides a number of features to manage, automate, and streamline these processes:

- **Trade Control Determination:** Automatically place shipments on hold that are subject to legal, regulatory, or corporate trade controls. Alert the appropriate trade compliance or customs manager to review and address the issue promptly.
- **License Lifecycle Management:** Create licenses and manage the data collection and submission processes, automatically apply licenses to release transactions, track quantity and value balances on licenses, notify customs and compliance managers in advance of licenses expiring or expiring, and audit license usage.

Integrated Logistics Platform

Oracle has a holistic approach to logistics management. Using a single system approach, which includes Oracle Transportation Management, Oracle Global Trade Management, Oracle Trade Compliance and Oracle Customs Management, Oracle is able to provide visibility to trade and transportation order and shipment data in one application. Additionally, a robust supply chain event management and workflow engine allows companies and their trading partners to share data and documents, and more effectively control what they need, when they need it.

- **Document Management:** Determine and produce the necessary trade documents and certificates for each transaction. Validate the availability of key data elements. Use auto-assignment logic to help populate missing fields. With both Oracle Transportation Management and Oracle Global Trade Management it is easy to produce documents that require both trade and transportation data to complete and produce.
- **Shared Data Model, Workflow, and Services:** Built on a common platform, data objects are shared between Oracle Transportation Management and Oracle Global Trade Management allowing trade and transportation teams to work off a single source of truth and maintain complete visibility over the shipment as it progresses. Shared workflow and services allow for execution of cross-functional processes and seamless sharing of information, documents, and more.

Flexible Deployment Options

A broad range of deployment and pricing options are available for Oracle applications. In addition to traditional, on-premise models, Oracle offers a comprehensive portfolio of modern cloud solutions which provide customers with the widest selection of choices to meet their evolving business, IT infrastructure, and development needs.
